

ViziFDX - Getting Started

Registration

Go to the landing page at vizifdx.com and click the Sign-Up button.

Follow the registration process and confirm your email and password via the link sent by email.

Login to the application - you will see the user home page.

Onboard Script

Click the My Scripts button.

You will see a popup form to add your first script as the first step in an onboarding workflow that includes multiple steps:

Uploading the script file

Parsing the contents and writing to the database

Optionally adding your AI API keys if you have them to hand

Once completed, you will be returned to the my scripts page where you will see your script added to the page display as a card.

Click on the script card to go to the script home page and start analysing and visualising your script content.

There are bound to be some bugs but hopefully not too many got past the AI coding engine.

Enjoy!
